Gamas or what can be called a mass disorder is a disorder that can cause mass scale problems, gamas itself can be caused by many factors ranging from device errors as well as human error.

Network elements or network elements can also be called a group of devices used to build a network both small and large, network elements are mostly found in everyday life. For example, the usual network elements encountered on the subscriber side are UTP (Unshield Twisted Pair) cables, routers, and most recently the ONU (Optical Network Unit). And also there is a device that is on the side of the organizer (PT.Telkom) is MSAN and DSLAM.

NOSS - A (New Operation Support System Assurance) is a web-based information system created by PT.TELKOM to provide ease in handling quick and precise disorders and play an important role as a montirong towards improving services to customers
