ABSTRACT

Employee data processing from PT. PINS Indonesia is still not maximized because there is no information system of curriculum vitae reporting that is used for human capital division. The main problem with reporting curriculum vitae PT. PINS Indonesia at this time is still a long process of searching data of PT. PINS Indonesia which currently uses the search method manually. The curriculum vitae reporting information system is made to facilitate the process of searching and printing employee’s personal data that will process the promotion and appointment of permanent employees. Therefore, it is necessary to have a curriculum vitae reporting information system that functions as a system that can speed up the data search process and the printing of curriculum vitae documents for employees of PT. PINS Indonesia. In the process of developing this information system, the authors use Rapid Application Development (RAD) method. The authors consideration in choosing RAD method because in the development process using RAD method can be done quickly and appropriately applied in case study of information system of reporting curriculum vitae which do not have complex system so that development process can be done with a short time. The result of this research is an application reporting curriculum vitae that can facilitate the performance of human capital division related to employee data search and employee cv printing.
