The development of information technology is currently growing rapidly, the development of media technology in providing information is increasingly efficient. For that, in processing information, technology is needed that is good, effective and efficient, because information in an institution is very important. The purpose of making a dashboard for a train stop is to make it easier to provide information on train stops at the station quickly and accurately. Data collection methods used are interviews and direct observation. This dashboard design uses website-based (PHP) and database (MYSQL) programming languages.
