Micro, Small and Medium Enterprises (MSMEs) are business activities that are able to expand employment opportunities to provide economic service, contribute to the overall economy, and provide income for the owners of MSMEs. By solving these problems, this research will develop a mobile application-based Android that can be used by MSMEs with prototype models. Prototype models can be used to connect customers' misunderstandings about technical things and explain the specifications that customers need to develop software and prototype programs for showing to users what they actually want or need. The result of this research is an Android application aimed at MSME owners and Android applications to place an order. In the MSME owner application, it can be used to introduce stores, products, and order addresses on Google Maps. While the order application is used for ordering products and looking at the store. Marking that has been given by respondents, MSMEs and customers showing that respondents are satisfied with the applications and features in the application that have been developed and implemented.
