ABSTRACT

Muh. Nur Alam A., Design of the User Interface on the Website App Estimator, Undergraduate Study Programmes Informatics Faculty of Industrial Technology and the Informatics Institute of Technology Telkom Purwokerto, 2017

The needs of the rapidly growing services applications require the services of a programmer. RectMedia as a digital agency in Indonesia provide solutions website estimation. App Estimator is the website that will estimate the costs required in the making of the application. A website requires the design of the user interface to make it easier for users to interact with the system. The creation of this report aims to add insight will design the user interface.

The collection method is carried out on this report consists of a method of interview and discussion with the developers website. Literature review is also underway to add a theory relating to the preparation of the report.

This report will discuss about the design of the user interface with the functional needs of the website. Considerations in making the user interface should look at the habits of the user when interacting with the system.

The conclusions and suggestions of this report is the presence of planning and consideration in designing the user interface. The functional needs of the website should be displayed. The user interface must be able to provide comfort on the user.

Keywords: Website, App Estimator, user, interface
