

ABSTRACT

PT. Telkom Access, as a subsidiary of PT. Telekomunikasi Indonesia, Tbk (Telkom), focuses on construction services and network infrastructure management. In carrying out its various services, PT. Telkom Access requires various equipment and work tools. Therefore, they provide a storage place called a Warehouse, which is used to manage Networking Tool Equipment (NTE) equipment. Klojen Warehouse, located at PT. Telkom Access Malang, is a very busy place. Every day, this warehouse becomes a center of activity because it is used by Sales Orders (SO), company work partners, and technicians who need work equipment and inventory materials. To ensure there are no errors in the material distribution process, Klojen Warehouse carries out data management which functions to regulate all stages of material distribution. This aims to ensure that the process of providing construction services and managing network infrastructure runs smoothly.

Key words : Networking Tool Equipment , Warehouses , inventory.
