

ABSTRACT

Internship is one of the requirements for graduation to obtain a bachelor's degree at Institut Teknologi Telkom Purwokerto. Through internship, students can practice what they have learned in the classroom. In this report, the author describes the internship experience at PT Unicam Digital Pictvres, a creative digital agency company located in Sleman, D.I. Yogyakarta. The author was placed in the "Technology Development" division and given the main task of creating a company profile website for PT Unicam Digital Pictvres. In addition to the main task, the author was also given other tasks, namely attending an event called Kedaireka, and designing a report on the contribution of the Kalasan Valley start-up community to D.I. Yogyakarta. The process of designing the company profile website began with the design stage using the Figma software. After designing the website design, the next step was front-end development. The author used Visual Studio Code software to write and edit programming languages. The programming languages used were 3, including HTML, CSS, and JavaScript. In addition, the author used a framework called bootstrap to facilitate the development process. This internship has provided great benefits for the author, both academically and professionally. The author hopes that the internship experience can be a foundation for entering the workforce and improving skills and experience.

Keywords: internship, front-end, website design, company profile website.
