

ABSTRACT

In his contemporary now a technology that is very popular among humans is the internet, because the internet is a large library in which there are billions of information in the form of text that can be accessed by all humans when needed. On the internet, not only text, on the internet there are also various kinds of cyber life such as sports, entertainment and so on in the form of videos. Technology is growing rapidly as is the case with Triple Play services and the internet in one network or one line that uses optical transmission media. This is a very good innovation because it combines three services that initially could only be one network for landlines that still use copper networks. The purpose of the Triple play service that already covers the internet, TV and landline in one ONT device. From the results of the new installation of the Triple Play service, customers do not need to install other supporting devices such as satellite dish, cellular modems and copper phones.

Keywords : Fiber To The Home (FTTH), New Installation (PSB).
