Technological progress is something that cannot be avoided in this life. The use of information technology is a necessity in every company, and there is a need for an approach in developing an integrated system throughout the company. This condition is obtained by adopting technology that can integrate parts of the company, with ERP applications allowing data integration within the entire business organization so that it can produce more relevant information for making decisions. Open source technology is a technology term that consists of software that can open / free the source code for others to see and let others know how the software works. GNU Cash, and Odoo are financial information systems open source that can be owned for free without the need to pay a license.
