

## ***Abstract***

*Kampus Mengajar is a program focuses on improving four aspects, namely literacy, numeracy, administration and technology adaptation in targeted schools. This program is focused on helping elementary schools in 3T (Terdepan, Terpencil, Tertinggal) areas, one of them is SDIT Bina Mulia Kediri. School facilities are important in supporting the learning process and explore students' interests and talents. The unavailability of inadequate library administration underlies the design of school library administration. The library administration designed in three steps such as inventory, classification and library's catalog provision. Inventory and classification stage divides books into two categories, namely textbooks and story books. Catalog provision stage is designed on a website prototype using the Hypertext Preprocessor Programming Language (PHP) with Code Igniter framework. The management of library administration by Kampus Mengajar students has a positive impact on improving administration management and technology adaptation at SDIT Bina Mulia Kediri.*

***Keyword*** : facility, library, technology, administration.
