Jenderal Corp is a company engaged in software and web development as well as IT consulting located in Purwokerto, Banyumas Regency, Central Java Province. Jenderal Corp opens learning opportunities for students who wish to join for internships. The number of enthusiastic students who apply for internships via email to Jenderal Corp, has a little problem in selecting internship student admissions via email because many students are applying for internships at Jenderal Corp.

One solution to the above problem is to utilize information technology in the form of a web-based information system. Through a web-based information system, it is hoped that the Jenderal Corp will facilitate the selection process for internship students and can easily find out complete information about the bio of prospective internship students. by using this website-based apprenticeship information system Jenderal Corp can assist in the management, implementation and reporting of internship activities.

Keywords: Information Systems, Database, website and Framework Codeigniter.
