

ABSTRACT

The android-based employee information application is an application that has the goal to facilitate the control in and out of employees in the Statistics of Banyumas Regency. The development of this application was designed using flutter with the dart programming language. The method used is the waterfall method, where the existing stages are Requirements Definition, System and Software Design, Implementation and Unit Testing, Integration and System testing, Operational and Maintenance. The author creates the frontend part of the application in the form of a Home User menu display that contains exit and incoming permissions and AkunUser which contains profiles and profile edits. The result of this practical work results in an application that is useful for employees in their daily activities. With this application, it is expected to be useful in optimizing the maximum control in and out of employees.
