

ABSTRACT

Information technology and information systems today are growing rapidly. The use of IT/IS includes application, website, and the internet. Statistic of Banyumas Regency is government institution which in the activities of daily work unit cannot be separated from the use of information technology. However, in the activities of employees outside the office there are obstacles that occur such as control and supervision that is not optimal, so that sometimes it is too late to return to the office. Therefore, the entry information application (KKM) is a solution to solve these problem. In building the KKM application, it cannot be separated from the UI/UX design. The UI/UX design method use User Centered Design (UCD), which is a user-centered design methodology. The result of writing this report is a user interface design document.

Keywords : User Interface, User Experience, User Centered Design (UCD), Application Android
