The development of technology is currently growing very quickly in various fields, such as the field of information. In its development, the information that is currently available has grown far, especially when it is accompanied by the development of the internet so that current information can be conveyed more quickly, even in a matter of seconds. With this development, information currently has a special media or place on the internet called a website. The Department of Transportation of Cilacap Regency in this case as a government agency that is required to be transparent in disseminating information to the general public has implemented the use of website media as a medium for disseminating information online. However, in this case the information website of the Cilacap Regency Transportation Service has a user interface or user interface that is outdated, messy, and less comfortable to look at. Therefore, this study aims to redesign or redesign the user interface or user interface using the Adobe XD application. With this research, the results of existing research can be useful as a reference for the Office of Transportation of Cilacap Regency and can be used properly.
