Financial technology appears simultaneously with people's lifestyles which are currently very much dominated by the use of technology in their daily lives. CARDS is a digital card application that can be used as needed, such as paying school bills, electricity bills, buying credit, and others. The CARDS application was released on March 4, 2021. Since CARDS was released there has never been a design improvement or a new version design. In addition, with a large number of members, as well as requests for additional features. So it was felt to make a design change. Design changes in the User Interface (UI) are also very necessary because following the times the design style changes. The purpose of redesign is to make users more comfortable in using the application, as well as to improve visual quality. The process of changing the design uses Figma tools. Figma is a cloud-based design tool with the concept of sketch functionality but is better when collaborating between other designers. The results of the redesign will make the CARDS application look more modern and will make users more comfortable with the new design style.
