

ABSTRACT

Bayu Wira Saputra (17103025) - TESTING THE USE OF THE VILLAGE FINANCIAL SYSTEM (SISKEUDES) USING THE USABILITY SCALE SYSTEM (Case Study: Villages in Purbalingga District)

The government uses Information and Communication Technology to manage village finances, in managing village finances the government develops an application called the Village Financial System (SISKEUDES). The Village Financial System Application (SISKEUDES) is an application developed by the Financial and Development Supervisory Agency (BPKP) in order to improve the quality of village financial governance. However, to run the SISKEUDES application, there are still obstacles, namely the availability of human resources (HR) and village officials who do not master computers. After the implementation of the application in the village government, in fact in the use of SISKEUDES there is still a mismatch in the use of an information system with what is expected by the user of the application. This research required testing of 69 villages in Purbalingga Regency, with one village one respondent, namely village officials who used the SISKEUDES application. The system usability testing model that is known to be able to perform this task is to use the System Usability Scale (SUS) questionnaire framework to measure usability aspects according to the user's subjective assessment. The purpose of this study was to measure the usefulness of SISKEUDES using the System Usability Scale with a Village Case Study in Purbalingga Regency. In this study, to obtain data, a System Usability Scale (SUS) questionnaire was made for village officials using SISKEUDES with a total sample of 69 respondents. Based on the research that has been done, 59 village officials or 86% of respondents are satisfied (Above Average).

Keywords: Financial Management, Sistem Keuangan Desa (SISKEUDES) and System Usability Scale (SUS)
