The spread of disease in Indonesia is increasing. The spread of this mild disease in Indonesia can be solved by self-medication or self-medication. However, self-medication or self-medication has side effects if the portion, according to the drug, or the estimation of the illness is not correct. Self-medication should be carried out by consulting or seeking information from trusted sources such as doctors or other health facilities. However, consulting to a docker or health service center takes time and effort, so it sometimes makes it difficult for the community. Conversational Bot or Chatbot can be a solution to these problems. With a chat bot equipped with health consulting services regarding minor illnesses, the public can obtain information more quickly and easily using only a mobile device or laptop with an internet connection.
