Field Work Practice (PKL) is an activity carried out in accordance with the skills possessed, in-depth mastery of skills will be obtained when getting direct work experience in the world of work, PKL provides many benefits for students such as gaining skills that are not obtained in the world of education. So by participating in street vendors can improve the quality and relevance of education and business. Technology that is growing rapidly in various fields is also growing rapidly in the field of education. So that in this PKL report, several implementations of work are presented, namely designing a front-end for a Laravel-based school academic information system website. A web-based school academic information system was created to assist teachers and students in obtaining information related to school identity, school member data, finance, management, and the Extra section consisting of attendance, guest books, and PPDB. Therefore, a school academic system is created that will help students and teachers in teaching and learning activities so that learning becomes easier and more effective.
