

ABSTRACT

At this time, technological advancements, particularly in the field of personal computers and the internet, have resulted in changes in the activities of businesses and organizations. As a result, businesses and organizations must take advantage of technological advancements to aid in the settlement of diverse issues. However, PT. Main Data Cirebon Dynamics still does not take use of technical advancements when gathering attendance data. Manual attendance is taken when entering and leaving the internship or when dealing with street sellers. Because it is slow and ineffective, this strategy is extremely challenging for trainees at the organization. To address these issues, the author proposes creating and building a website-based attendance system. So that interns can easily and quickly take attendance.
