

ABSTRACT

PT. Data Utama Dinamika is an internet service provider and network access provider that has served the people of Indonesia for many years. This PT is very well known and has many branches in big cities. One of them is in Cirebon Regency, each year they can accept as many as 20-25 interns. At the present time with this very rapid technological development, PT. Main Data Dynamics still use manual attendance for their apprentices. This is certainly not efficient, so the PKL team suggested and created a web-based attendance information system for interns at PT. Main Data Dynamics which is used to perform attendance online, collect data for interns online, and can monitor the activity of interns as well. In this case the author gets a task on the design section of all displays on the attendance website at PT. Main Data Dynamics and using Figma tools to design the view.
