Public transportation in Banyumas Regency is regulated by the Department of Transportation. In Banyumas Regency, there is not yet a system that integrates all public transportation in one system. The lack of integration of public transportation also makes the community not have more information about the types of transportation that pass in Banyumas Regency. So we need a system that integrates it all.

In preparing the report, the methods used include: interviews, namely direct question and answer with the field supervisor and the Department of Transportation; discussion, namely by discussing with the team to solve the solution, and literature study, which is to include material, opinion or someone's findings into the discussion with the same problem.

From the problems and processes above, the Department of Transportation collaborates with the Department of Communication and Informatics of Banyumas Regency to make a solution to the problems above, namely a web-based public transportation integration application which is abbreviated as Intanmas which aims to make it easier for the community by integrating all public transportation routes that can be used by the community. to travel.

Keywords: web, banyumas, application, integration, transportation.
