**ABSTRACT**

In this digital era, the website has become an important requirement that has been implemented from agencies to government agencies or institutions. By utilizing the website, information management will be easier. In addition, with the website, it will be faster and easier for users to access via the internet with certain platforms. This is the basis for the application of information technology.

In designing the Banyumas Puppet Museum website, of course, a good user interface is needed so that it can be understood by the user. The user interface on the website must be able to work quickly and be able to represent the Banyumas Puppet Museum well.

In a website, must pay attention to several aspects, one of which is the layout. Layout is used to increase the engagement of the website itself. Therefore, the shape and size of each content can be different according to the interests and priorities of each.

Users will feel more comfortable and more focused with a website that has a minimalist design. The minimalist design can speed up loading times because the components are lighter. This will improve the user experience in browsing the website.
