Abstract

Frontend Engineering Bootcamp program which was conducted by PT. Ruang Raya Indonesia was one of programs that could be found in Kampus Merdeka website with Studi Independen category program. In this program, students who had been registered as selected participants would learn things about frontend web developer field and some of them were Git usage, HTML-CSS, SASS, Javascript, and the others. The program that was initialized by Ruangguru encouraged Campers (bootcamp participants) to be able to compete in industry. Not only did Campers learn about programming but also learned about some soft skills in this bootcamp such as how to think critically, do problem analysis, and communicate well from the available courses.

In the end of this program, Campers were divided into some groups that were contained Front End and Back End bootcamp participants to do the final project that asked participants to build websites by implementing materials which had been given for 4 months long. The time for finishing the final project was about a month before getting scored. One of the websites which were built was Pusat Ngoding that is a coding mentor finder platform.
