ABSTRACT

Android Application Developer Independent Study Activities include individual learning and final projects in the form of teams. In individual learning, each participant will take classes in asynchronous form (online through learning modules at Dicoding Academy) where participants can consult with experts regarding the material they are learning through discussion forums. In addition, each participant will have a supervisor as a place of consultation if non-academic difficulties are encountered in participating in the learning. In this independent study program, there is one learning path provided, namely the Android Learning Path. Participants will get a competency certificate in each class in the Android Learning Path if the participant successfully passes each exam/assessment held for each competency. After participating in this program, participants are also prepared to take the global Android Developer Associate certification exam from Google which can be taken after participating in this Independent Study activity.
