

## ABSTRACT

Education is a necessity as well as the right of everyone to develop all their potential. The educational process allows everyone to be able to achieve a better self-quality. Along with the development of science and technology, humans are required to become more mature and advanced humans so that they can continue further developments. With interactive multimedia learning methods, students are expected to be able to understand the material well. In Grujugan Village there is a children's learning center called a learning center. The learning center is a place where children from Grujugan village can receive additional lessons such as English, science, mathematics, and others. In this case the learning method has been very well done by the teachers, but the students sometimes feel bored and bored so that learning becomes less effective. This problem arises because students often learn just by looking at the writing and lack of interaction with the teachers. Therefore, in this community service, it tries to introduce and at the same time teach learning using interactive multimedia. With the cooperation of the learning center teachers, as well as various supports from the very supportive village government, the results obtained are the viiiublicviiinttation of new learning methods which will be an option in future learning, and also the teachers will find it much easier to teach in the future.
