# ABSTRACT

Grujugan Village is a village rich in potential, starting from the tourism of the Kampung Tudung to weaving craftsmen in almost every house of its citizens. The problems that exist in the grujugan village are about village services, tourism promotion and woven crafts. In government services, the Grujugan village still has several shortcomings, one of which is the management of Grujugan village social assistance data such as BPNT, KIP, KIS, PKH data, and BPJS Mandiri data which are still manual using excel and also printed files. Therefore, the author compiled a work program for the construction of a social assistance website for the village of Grujugan as a means of better and systematic management of assistance data.

This work program aims to help the Grujugan village apparatus in managing the social assistance data of the Gujugan village community, which previously only used excel files and printed files, it could be easier by using the Gujugan village social assistance website. With the Gujugan village assistance website, the Gujugan village government is no longer overwhelmed in managing social assistance data and this website can also support the Grujugan village vision and mission towards a digital village.

Keywords : Website, Digital Village, Social Assistance, Grujugan.
