

ABSTRACT

One form of presentation of tourism information is through viewing in the form of visualized data or information associated with the geographical conditions of a region. Web-Based Purbalingga Regency Tourism Application Design is one form of regional tourism promotion in Purbalingga Regency in order to attract tourists to visit Purbalingga Regency. In the Puralingga district itself, there are many tourist attractions in the form of culinary tourism, historical tourism, and cultural tourism. With this website, it is expected to be able to expand the dissemination of information about tourism in Puralingga. Backend website design includes website design, database, and server management. Web-based Purbalingga Regency Tourism Application Design is made using the HTML programming language. The time of the research starts from July to August 2021. The result of this research is a web system that can display several tourist attractions and tourism destinations in the Puralingga Regency, making it easier for the public to find information about tourism in the Puralingga Regency easily.
