SMK Assalafiyah Sleman is a vocational school under the auspices of the Assalafiyah Mlangi Foundation which is located near the community settlement of the Mlangi hamlet, Nogotirto Village, Gamping District, Sleman. The SMK previously had a website-based application in managing their academic system but did not have access to develop or view the source code of the website and they wanted to create a separate website based on an existing website. In the process, the author uses the Laravel Framework as the Back End and uses the MySQL Database as database management .

Keyword : *Back End , Laravel, Framework , MySQL*
