Travelers often have difficulty in knowing prayer schedules, qibla direction and other supports for worship. The rapid development of technology makes the smartphones they hold provide many innovations that make it easier for all aspects of their lives, including to worship by reading the Qur'an through the heart application. when traveling, often do not know the prayer times and the qibla direction for the area being reached. Therefore, a heart application was made to help travelers in their affairs such as knowing prayer times, qibla direction and other worship supports such as dhikr using digital prayer beads and digital Al-Qur'an to support worship. With the heart application, it can have a positive impact on travelers to perform their worship using a smartphone.
