Today, the world has entered the era of information-based competition, information becomes a valuable asset for a business institution in winning the business competition. A website is one way to sell services without a large and time-efficient cost. User Interface is one of the most important factors in building a website. Without careful preparation and design, a certain website can not run optimally, can even cause users to move to other websites. One of the main factors in the development of a website is the user interface. Without the right design analysis, of course, the utilization of the website cannot be optimal. Often the website used by the user is considered very comlicated and not userfrienldy so that sometimes the user moves or refuses to open the website. The purpose in this study is that the author created a User Interface design on the car steering wheel course website (Kurstir) using Figma.
