Technological developments have affected the financial system. Which was originally a physical form began to turn into to digital or can be referred to as FINTECH. PT. Cahz Teknologi Inovasi this time makes a loan application product that can be used for online lend and payments by people in the village. Along with client requests, this application becomes complex with the addition of new features according to client and user needs. To carry out this development, special tasks are needed, one of which is being a frontend developer who makes the appearance of the application sketch into a website display with the aim of satisfying users and providing a better user experience. In addition, VSCode is a tool that serves to help developers to develop interactive applications. Therefore, it is necessary to do application development from the frontend developer side. The results of developing this application can make it easier for users to use the application, maximize functions to make it easier for people in the village to lend funds.
