Various economic activities ranging from the tourism sector to trade were forced to close their businesses and lay off their employees due to the impact of COVID-19. One alternative way to be applied during the current pandemic is to use technology, namely virtual tours. Virtual Tour is a technology created so that users can interact with an environment that is simulated by a computer. Virtual tours make it very easy for those who want to travel to still be able to vacation anywhere without having to leaving home. The use of technology and the internet is put to good use by PT. Tourezia, where to keep the tourism industry running, PT. Tourezia designed a virtual tour website information system. The first step in making a website is to design the Front-End first. This Front-End task is to move the design from the UI designer into an interactive form and make the design come alive. This website is made with full features such as home page, preview, find a destination, explore, also about us.

Keywords: Tourism, COVID-19, Front-End, Website, Virtual Tour.
