

Abstract

The rapid development of technology is one of the latest breakthroughs for entrepreneurs to continue to increase their market reach. The goal in the development of information technology in an organization is to improve the quality of service and performance of an organization. At PT. Applications Bisnis Indonesia which is a subsidiary of PT. Ultima Rasa Acceleration (ULTRA), which focuses on IT, already has two products, namely AIOPOS.ID and also Aioaccounting. Where Aiopos is a Point Of Sale application, which can be used in various MSME businesses, while Aioaccounting focuses on website-based financial accounting. In this study, the system built is a front-end from AIOPOS.ID which contains source code and a responsive display. The purpose of making this front-end is to implement a redesign from the UI/UX developer. With this new look, it can provide a new atmosphere and also a new experience for users.
