ABSTRACT

Along with the development of technology provides a very large impact in the development of information technology. Android applications are now growing rapidly in various fields. In this day and age, many people rely on mobile phones or smartphones as a means of communication, information, and also business. CV. Perdana Putra is an MSME company in the convection sector that sells various bicycle equipment, both clothes, hats, gloves, bicycle parts, etc. At this company, students are assigned to create an android application that is used to store data on financial expenses and income in the applications that have been made. The application can run well and can be used in companies where companies no longer need to use books as a data storage medium. The application can run existing features and test results according to the required criteria where it can store data.
