

ABSTRACT

Practical work is one of the activities that can provide direct work experience for students, it can also provide opportunities for students to implement the knowledge that has been gained during lectures. This activity is a prerequisite for completing studies at the Faculty of Informatics, especially for the Informatics Engineering S1 study program. This Practical Work / Field Work is carried out from 23 August to 29 October 2021. In carrying out this practical work, the author has the opportunity of PT. Telkom Indonesia Witel Purwokerto Finance division. The activities carried out during practical work are to create a website to display the results of the recapitulated data which is commonly called P.OCA in the form of graphic data and progress tables that have been carried out in the Finance division. The activity was carried out in a Hybrid manner, namely WFO (Work from Office) and WFH (Work from Home). From the implementation of this practical work, the author can understand how to create a graphic website to find out the amount of use of the P.OCA file.

Keywords: *Practical work, Website, Graphic, SQL, Database P.OCA*
