ABSTRACT

The development of technology which is currently very advanced and the information circulating is very large and extensive so that agencies must be able to follow the development of the technology. So the need for information for agencies is very important with the internet, which makes it very easy to help work. Where the attendance system at institutions that used to still use a manual system, which had a very large risk of losing attendance data, then with the development of this sophisticated era, the attendance information system has used an automatic system, where the usefulness of attendance for government agencies is very important because can assist in monitoring work in order to get maximum work results and in accordance with shared goals. The purpose of the attendance information system is expected to be able to monitor the performance of employees at DINKOMINFO Banyumas Regency. This attendance information system uses computer technology, namely its application with a website-based attendance application, which can facilitate employees in the process of taking attendance, diaries, recap data, and can minimize the loss of attendance data from agency employees.
