

ABSTRACT

Telecommunications technology in Indonesia is currently growing, it makes the number of companies engaged in telecommunications is increasing. Even in one family, usually each family member has one cellphone or even more than one. The high power of people's consumption of technology can be seen when there is an increase or upgrade of existing technology in telecommunications, as currently Indonesia is entering the era of 5G technology, which previously had 2G, 3G, up to 4G/LTE generations. One company that can help service providers in the field of telecommunications is PT. Poca Group which is located throughout Java, Bali, Nusa Tenggara, as well as parts of Maluku and Papua. Established in 2007, as a global telecommunications service provider in Indonesia. PT. Poca Group participates in meeting user demands for high bandwidth and fast technology upgrades. At PT. Poca Technology includes operations such as installation and commissioning, operator-level network optimization, and managed services. PT. Poca Technology consists of top equipment vendors as well as telecommunications operator companies. In the discussion of this final report, the work on Field Survey Data Reporting through the Huawei ISDP Website will be discussed. So that the results of these reports can be reported to clients of PT. Poca Technology.

Kata Kunci : PT. Poca Technology, BTS (Base Transceiver Station), Website.
