The development and progress of a country does not escape the role of technology in it, technology becomes a new solution in overcoming various problems, increasingly complex problems require humans to continue to develop ideas and technological innovations in various aspects. A development cannot be separated from the role of the younger generation who are aware of the benefits of technology. The Bangkit 2021 program is a hardskill and softskill training program that aims to provide training and debriefing to 3000 selected students in Indonesia to produce generations. This program consists of 3 learning paths, one of which is cloud computing, which is an important aspect of technology development. With this learning path, it is hoped that it will equip young generations in Indonesia with skills in analyzing technology, developing and utilizing the cloud for the benefit of humanity. The Bangkit 2021 program lasts for 6 months which takes place online under the guidance of great instructors and mentors both at home and abroad.

Keywords: Bangkit, Cloud, Hardskill, Softskill.
