

ABSTRACT

Technology is the result of the development of science that occurs in the world of education. The technology applied in learning media in elementary schools has not been optimally carried out. Not all schools have implemented learning media using technology through the Microsoft Power Point application. Learning through Microsoft Power Point can foster student learning motivation because it presents various features that attract students' attention. In addition, there are applications that can support the learning process, namely Google Drive and Google Form. The use of Google Drive and Google Form can be used as a learning medium that can be accessed anytime and anywhere. Understanding technology from an early age is very good because the rapid pace of technological development makes children interested in learning technology. The use of computers is a very important role for education, especially students. Computers can be used as a very important administrative tool on future education. One of the programs to increase knowledge in the field of technology is the implementation of training and socialization. This activity was carried out at The State Elementary School 2 Grogol with the aim of introducing technology, especially computers, to students and teachers. The socialization carried out to teachers is the use of Microsoft Power Point, Google Drive and Google Form. Other activities are training that can be done for students in the form of computer training and Microsoft Word.
