ABSTRACT

The MBKM (Independent Learning Independent Campus) Activity Program is an activity of the Ministry of Education and Culture that offers several programs, one of which is the selection of writers for the program located at PT. Poca Network Solutions. Furthermore, in this program the author is placed in the data input section. In inputting this data there are several projects, one of which is the Indosat project, then there is the Nokia project, and there is also the Telkomsel project. For this project, you must use or use a website where this project can be inputted directly with other employees so it doesn't take long, because if done manually it will be very difficult to contribute to fellow teams and also in selecting all projects requested by customers. will take a lot of time. So to project Telkomsel itself, it uses 2 website accounts, namely using ineom and also ISDP on Huawei. For ISDP it is specifically used to capture employees in the field team, then for ineom it is useful to upload captures in the office team so that the project runs quickly without any revisions and for the team will also focus on their respective work.

Keywords: Website, Network, Telkomsel.
