ABSTRACT

Internship and Independent Studies or commonly abbreviated as MSIB is an Kampus Merdeka program. This program was created as an effort by the government to provide space for students to gain experience, information and new knowledge related to the professional world in the future. To support this program, MSIB invites several industrial partners from world-class companies or organizations whose credibility is guaranteed, so that students receive direct tutoring through experienced experts in certain fields.

The implementation of the MSIB is placed in a state-owned company engaged in telecommunications, namely PT. Telkom Indonesia (Persero) Tbk. Where in it is ITDRI. For 5 months through the MSIB program the author learned to hone soft-skills and hard-skills, understand what VR Based Learning is and what Pentahelix Network is. What has been achieved after 5 months of undergoing the MSIB program is that the author can create a UI/UX design for an application or website prototype on figma and can be displayed to examiners and interns.
