ABSTRACK

The rapid development of the non-cash payment system which is influenced by the shift in people's behavior and the expansion of merchants in Indonesia is currently realized due to the Quick Response Code Indonesian Standard (QRIS). The Quick Response Code Indonesian Standard (QRIS) (read as kris) is the unification of various QR codes from various Payment System Service Providers (PJSP) using a QR Code. QRIS was developed by the payment system industry together with Bank Indonesia so that the transaction process with the QR Code is easier, faster, and secure. Therefore, the Ministry of Trade and the Ministry of Education, Culture, Research, and Technology collaborated to create a program called the Young People's Market Movement (PMPR). One of the markets that get internship students is the Sumpiuh People's Market. Where the purpose of this program is that students are expected to be able to help process non-cash payments at the Sumpiuh People's Market free from counterfeit money, damaged money and lost money. The application of non-cash payments at Sumpiuh People's Market was previously only limited to manual transfers.
