*The internet is the impact of advances in information technology which is used as a medium of information in conveying and presenting information to meet the needs of the community. One of the information media used using the internet is a website. The KEJARI website belonging to the Pekalongan District Attorney's Office (KEJARI) does not operate in conveying and presenting information to the public because the website has been hacked by irresponsible parties. Therefore, it is necessary to develop the KEJARI website which in terms of developing government information systems in Pekalongan Regency is the role of the Pekalongan Regency Communication and Information Office (Dinkominfo). Website development is focused on developing a front-end website at the Pekalongan District Attorney's Office using Bootstrap. The results of the Field Work/Practice Work are in the form of a front-end system for the KEJARI website of Pekalongan Regency in the form of a user website display. The conclusion from the results of the Field Work Practice at the DINKOMINFO of Pekalongan Regency is to do the task of developing a front-end website at the Pekalongan Regency Attorney's Office using Bootstrap. The use of Bootstrap is applied as a framework that functions as HTML and CSS templates in the website programming process. KEJARI website serves as a medium of information for the Pekalongan Prosecutor's Office to convey and present data and information to the public or the public.*

**Keywords:** *Situs web front-end, Bootstrap*
