Satellite TV is one of the TV channels originating from Purwokerto Regency which has broadcasting coverage to Banjarnegara, Cilacap, Kebumen, and Purbalingga. Satellite TV displays various interesting programs such as entertainment, education, culinary, news, and many other programs. The news broadcast by satellite TV, is generally local news added with national news that is currently viral. Satellite TV needs a platform to be able to spread the news to be more structured and provide comfort for the readers. Therefore, we need a website-based news portal that can solve these problems. Website development requires a team with their respective job desks, and for appearance it takes a frontend developer who understands coding for display. In facilitating the preparation of the system, a framework is used which will become the framework of the system in order to facilitate the preparation of the program. The results obtained are programs that can display news entered by the satellite TV.

*Keyword : Development, Frontend Developer News Portal*
