Kebumen is one of the cities/regencies in Central Java Province and has many adequate regional facilities as facilities and infrastructure to support people's lives, especially the people of Kebumen Regency. However, the need is not always close to reach, there are often incidents where the facility closes when needed, for that we need a service that can provide information about the location of regional facilities. Supported by the development of information technology today where the website and the internet make it easy for people to find the information they need. The existence of the Kebumen Regency Communication and Information Office which has the aim of helping carry out government duties in the field of communication and informatics that can help the people of Kebumen Regency according to the authority given to the Region. For this reason, a website is needed that contains information about the location of existing facilities in the Kebumen Regency area. The Model View Controller (MVC) concept owned by the codeigniter framework is used in website development.

The result of the Field Work Practice/Practice Work is to build a website map of the distribution of the location of regional facilities owned by Kebumen Regency by utilizing the codeigniter framework. Suggestions for improvement on the next website are on the user interface to make it more attractive and improvements to features that are not running according to their functions.
