Information technology is currently experiencing very rapid development. In addition to the development of types of supporting application software, this development is also based on the increasing number of users of information technology today. Incoming and Outgoing Goods Recording MIS System PT. Sharp Semiconductor Indonesia is a system that can help companies input goods into and out of the MIS System at PT Sharp Semiconductor Indonesia. The process of recording incoming goods and outgoing goods is still manual data processing by writing in books, but can be made more efficient by developing a website-based system. This application is based on a website that uses PHP and MySQL as data storage, Unified Model Language (UML) used for system design is use case diagrams, activity diagrams, class diagrams. The result of this research is an application that can help companies to input goods in and goods out.
