ABSTRACT

According to Badan Pusat Statistik, the working age population is anyone aged 15 years and over. From data released by Badan Pusat Statistik (BPS) it was recorded that the working age population in August 2021 was 206.71 million people, consisting of 131.05 million working people and 9.10 million unemployed people. One of the important needs for job seekers today is information about job vacancies. The expected job vacancy information is accurate and up-to-date information. Most job seekers seek information on job vacancies by looking for manuals on social media, print media newspapers or announcements posted in companies. Based on these problems, Seven INC and researchers designed and development a Jobcares job vacancy website. Websites are built using html, css, and php. The results obtained are a website that provides information on job vacancies as well as being able to apply for jobs. The hope is that with the Jobcares website, job seekers can more easily find information about job vacancies.
