

Abstract

rapid assessment Based on a rapid assessment of the condition of irrigation networks throughout Indonesia, the targeted irrigation areas (DI) in both Provinces and Regencies are those with moderate to severe damage to irrigation networks that cannot be fully addressed with the current DAK allocation. PSETK is a requirement for IPDMIP participation, namely through the preparation of PSETK and SID (Inventory and Design Survey). Furthermore, in 2020-2021, it is hoped that all DI regions under district authority do not yet have PSETK, so it is necessary to develop PSETK in a sustainable manner.
