

ABSTRACT***COMPUTER NETWORK ARCHITECTURE AT WITEL TELKOM
BANDUNG***

Author:

Dimas Mulya Pratama

More and more computer users, seen in the era of information technology as it is today, raises the desire to connect with each other. The main factor that strongly supports the use of computers by many agencies and other businesses, namely to make it easier for computer users to be able to exchange data and find information needed quickly and precisely in carrying out each activity as needed. PT. Telkom Access always uses computers in data processing, just like in other large government agencies. So one of the facilities that have a very important role in carrying out these tasks is the Wireless Local Area Network (WLAN). With the network at PT. Telkom Access can make it easier to carry out daily work activities, namely in processing data, sharing resources and finding other important information. Behind it all, of course, cannot be separated from the existing network infrastructure.
