The Department of Youth, Sports, Culture and Sports of Banyumas Regency is one of the government agencies that implements Information and Communication Technology (ICT) to keep it up to date. Therefore, the Department of Youth, Sports, Culture and Tourism of the Banyumas Regency created a website to introduce Banyumas culture to people outside the Banyumas area and in the Banyumas area. The methods used in collecting data in this study include literature and observation. After conducting research, it was found that there was a lack of public interest in visiting the Banyumas museum and a lack of public interest in getting to know Banyumas culture. The method used to develop a system using the Prototype-Lowfidelity method. The Prototype-Lowfidelity method is very good to use because it saves more time in developing a system. Likewise, in designing this website using balsamiq because it is easy and fast.

Keywords: *Website, Prototype Model, Dinporabudpar, Balsamiq, Lowfidelity*
